

Hauptvorträge

H. Bippes

Basic Experiments on the Physics of Transition in Flows Dominated by Crossflow Instability

A. Bunse-Gerstner

Computational Solutions for the Algebraic Riccati Equation

G. Chavent

Duality Methods in Inverse Problems

G. Heindl

Verification Methods, Aims, Tools and Applications

R. Heuer

Sure and Random Viscoplastic Structural Vibrations: Analysis Versus Model Experiments

G. Iooss

Travelling Waves in a Chain of Coupled Nonlinear Oscillators

D. Körner

Convection Dominated Problems: Numerics and Applications

P. Le Tallec

Numerical Transition between Boltzmann and Navier Stokes Equations

P-L. Lions

Mathematical and Numerical issues in Finance

H. C. Öttinger

Viscoelastic Fluids: Phenomena, Problems, Progress & Perspectives

O. Pironneau

Domain Decomposition Methods for CAD

M. Potier-Ferry

Asymptotic-Numerical Methods

D. Poulicakos

Mesosopic and Microscopic Phenomena during the Impact of Molton Microdroplets on a Surface

G. Schneider

Bifurcation Theory and Stability on Unbounded Domains

E. Werner

Properties of Multiphase Materials - Micromechanics and Experimental Verification

W. Wunderlich

Imperfection Sensitivity and Buckling Behaviour of Shells

A. Zaoui

Structural Morphology and Constitutive Behaviour of Microheterogeneous Materials

Ludwig-Prandtl- Gedächtnisvorlesung

E. Krause

Slender Vortices

Öffentlicher Vortrag

I. Ekeland

Mathematical Models in Microeconomics
